

Connected Digital Home

The connected digital home with home networking offers a game-changing opportunity to companies throughout the ecosystem, including operators, service providers, device manufacturers and technology providers. The Connected Digital Home Service provides comprehensive analysis and forecasts of the worldwide connected digital home and home networking market, including in-home infrastructure, networked and web-enabled media devices, features, semiconductors, applications, and consumer perspectives. This service provides invaluable insights in areas such as wired and wireless home network use and hardware, alternative coax/phone wire/powerline network mediums, multimedia and entertainment networking, networked set-top boxes, digital media adapters/players/receivers, consumer network drives, network management, networked home automation, home network silicon, routers, residential gateways, and more.

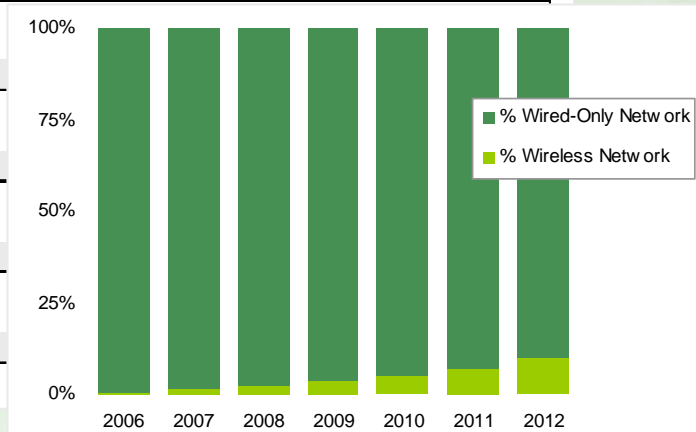

Areas of Coverage:

- DLNA Devices
- Consumer Network Storage
- Multimedia Home Networking
- Widget-enabled Consumer Devices
- Global CPE & Home Network Outlook
- Global CPE Market Shares
- Home Network Management
- Powerline, Coax & Phone Wire Networking
- Media Phone

Example of the Typical Level of Detail:

	2006	2007	2008	2009	2010	2011	2012
North America	326.2						
Growth Rate %		32.5%					
% of Total			50.2%				
Europe (EMEA)	174.2						
Growth Rate %		44.6%					
% of Total			26.8%				
Asia/Pacific	149.6						
Growth Rate %		60.0%					
% of Total			23.0%				
Worldwide Total	650.1						
Growth Rate %		36.3%					
% of Total			100.0%
